## Product Data Sheet

### **BILGE-BRITE®** **Marine Bilge Cleaner**

BILGE-BRITE® Marine Bilge Cleaner is the product of choice for hydrocarbon remediation of bilge in maritime and large pleasure craft.

BILGE-BRITE® Marine Bilge Cleaner is widely accepted in all areas of hydrocarbon remediation.

BILGE-BRITE® Marine Bilge Cleaner is used for the remediation of bilge that is contaminated by Hydrocarbon drips, leaks or spills of lubricants, bunker oil, gasoline or diesel.

BILGE-BRITE® Marine Bilge Cleaner is added directly to the bilge and will immediately knock down vapors so that the flashpoint danger of the vapors is eliminated.

BILGE-BRITE® Marine Bilge Cleaner is infinitely soluble in both fresh and salt water. The water will assist the deep penetration of BILGE-BRITE® Marine Bilge Cleaner into the solid sludge buildup in the bottom.

BILGE-BRITE® Marine Bilge Cleaner will break the hydrocarbon chain on contact. The resulting hydrocarbon fractions become

nutrients for naturally occurring bacteria in the water.

When the bacteria consume the hydrocarbon fractions, all contamination is neutralized and therefore eliminated.

Heavy metals from engine wear are often deposited in the bilge. The sludge that contains these metal particles will soften and breakup when treated with BILGE-BRITE® Marine Bilge Cleaner.

These heavy metals are attacked by BILGE-BRITE® Marine Bilge Cleaner, which appears to chelate these metals so that they pose no hazard to the environment.

The sludge layer will be smaller than if not treated with BILGE-BRITE® Marine Bilge Cleaner due to the fact that the hydrocarbons are broken down and separate from the water in the bilge.

This separation results in a water layer between the hydrocarbon fractions and the sludge. The remaining sludge will be a cleaner layer of rust, dirt, etc.

Sludge often covers the pump pickup in the bilge. BILGE-BRITE® Marine Bilge Cleaner lowers the viscosity of the sludge. This lowered viscosity assures that pump off of the bilge will be faster and easier than ever before when you treat your bilge with BILGE-BRITE® Marine Bilge Cleaner.

Recommended treatment of smaller vessels up to 60' is one quart between pumpouts. Larger vessels up to 120' should use one gallon. Maritime vessels such as tankers, container ships, freighters,

cruise lines, etc. will require 5 gallon treatments.

Recovered bilge that has been treated with BILGE-BRITE® Marine Bilge Cleaner.
